

SCHUFF STEEL COMPANY

March 2, 2007

Letter of Recommendation

To Whom It May Concern

I have been working with Mike Poppe for over 14 years. Precision Heavy Haul has delivered all of the oversized and overweight loads for Schuff Steel the entire time.

The 1st time I worked with Mike was in 1993. The shop had built a large 12'-0 diameter pipe T section. The weight was approximately 80,000 pounds and was 16'-0 high and 20'-0 wide. When it was time to load his people came into the shop with all of their equipment and we loaded this section onto the trailer. Within about an hour the piece was fully secured and tied down ready to ship,

Since then I have worked on many projects with Mike. For Example: Trusses for Intel Fab 4 building, Trusses for Chase Field , The Eiffel Tower in Las Vegas, Large Full Span Bridges in Las Vegas, and all of the trusses sections for the Cardinals Stadium to name a few.

With the type of work Schuff Steel does quite a few of the projects require special trailers. We will get Mike on board in the beginning of the project and he will design the trailer and then he will fabricate the trailer for the project.

In summary when PHH says they can do it, THEY CAN

Sincerely,

Rick Vogt
Schuff Steel
